TRANS-OBTURATOR URETHRAL SUPPORT SYSTEM

BARD

scaled down to fit on page -- does not represent actual size

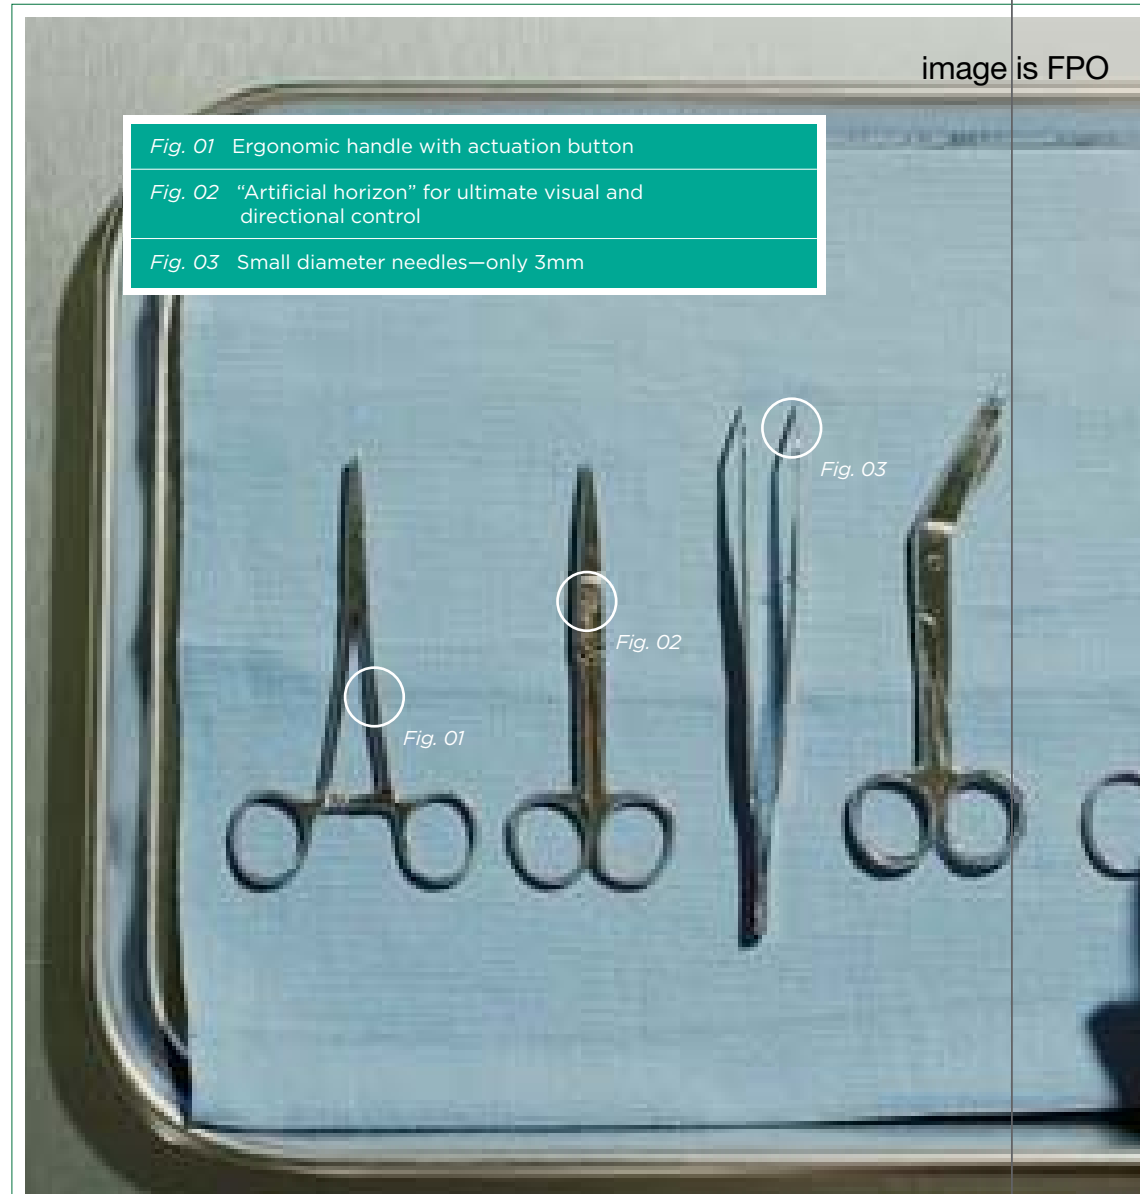

Better mesh means a dimensionally stable knit throughout the entire length of the graft. Better is an implant that is lightweight due to reduced density. A mesh with larger pores to encourage tissue ingrowth. And better is unsurpassed stability that delivers tension-free, self-anchoring support that means resistance to deformation during placement.

Retropubic/Suprapubic Instrumentation image descriptor

Better instrumentation means Retropubic and Suprapubic introducers with strong, low profile 3mm needles. Built-in artificial horizons with visual and directional aid for easy "pass, connect and go" needle passage. And instrument handles designed with the human hand in mind. Better is ergonomically-placed finger depressions with easy to grasp rubberized grips. Better is simply better tools, which **means a better procedural experience.**

Better thinking produces breakthroughs. Like the Align™ System's improved sheath system, with intuitive push-on connectors that connect you to the implant—easily, seamlessly. Better thinking means a dual-colored tubing system for easy visualization during cystoscopy. And better means smart developments like a mid-point peel tab with an easy-release function, which **means more accurate, more controlled mesh placement.**

From our research to your operating room, with Align™, Bard connects your experience with our expertise. Built to make good even better. Designed to make what was useful, intuitive and integral.

Align makes the connection.

The Align™ Urethral Support System and Align™ TO Trans-obturator Urethral Support System are members of the Bard family of products—where insight and ingenuity meet research and agile thinking to create products, practices, and opportunities that serve both physicians and patients equally. At Bard we know that beyond knowledge lies intuition—the right questions, the right connections, and the means to revolutionize the future of women's health treatment options.
